

RQ3: Coverage and Selective Accuracy at Locked T=0.65

T = 0.65 is LOCKED from the separate 40-question FinQA DEV calibration set; it was not tuned on the frozen 140.

Always-answer baselines have coverage = 100%, so selective accuracy equals overall displayed correctness.

UQ abstains on 62/140 questions, raising accuracy among answered cases while reducing coverage. Error bars: Wilson 95% CI. n = 140.
